

ALEXANDER GABUTAN

+63 9189575744 | alexhuntmel23@gmail.com | Cebu, Ph.

A hard-driven and computer-literate individual with a strong passion for contributing to the digital world. eager to learn, adaptable to training and dedicated to providing high-quality performance and output, aiming for professional development and continuous skill enhancement.

EXPERIENCE

IT ASSOCIATE INTERN

June, 2024

FREELANCING VIDEO EDITOR

2019 - 2020

EDUCATION

BACHELOR OF SCIENCE IN COMPUTER ENGINEERING

College

Cebu Institute of Technology – University
2020 - December 2024

Senior High School

UNIVERSITY OF CEBU – METC

2017 – 2019

High School

Lyceum of Cebu
2013-2017

SKILLS

- Computer Literate
 - Problem-Solving & Troubleshooting
 - Project Management & Teamwork
 - Critical Thinking & Communication
 - Video Editing
-

SEMINARS

- Charting the rise and Evolution of AI technology and ethics
 - What does a Web Developer Feel Like?
 - Introduction To Ethical Hacking
 - Seminar Series in Software Engineering
 - Taming on Software Complexity
-

PROJECTS INVOLVED

Smart Circuit Breaker System

Project Lead and Developer
(December 2024)

<https://github.com/ayexhehe/SmartCircuit>

This project centers around a web application designed to help homeowners monitor their electricity consumption and billing in real time, while also providing alerts for potential electrical hazards. Developed using HTML, CSS, and JavaScript, the interface offers users intuitive access to system data and controls. The web app communicates with backend components built using C++, Firebase, and Arduino Nano, enabling real-time updates and automatic safety shutdowns to prevent accidents and ensure electrical safety.

HOME AUTOMATION with Voice Control

Project Lead and Developer
(October 2024 – December 2024)

This project features a mobile application that allows users to remotely control their home appliances using voice commands, providing a convenient and user-friendly smart home experience. Developed with MIT App Inventor, the mobile app interfaces with IoT-enabled hardware components powered by C, C++, and Arduino Uno to ensure smooth automation and real-time control.

Park - It

Front-End Developer
(2024)

It is a school project, C#-based parking management system designed for administrative use. It allows users to generate parking codes for specific destinations, providing a smooth and convenient experience for car owners. The system includes an admin panel for tracking and monitoring available parking spots in real time, streamlining the overall parking process.
